

(h) Except as provided in § 219.201 (with respect to non-qualifying events), each specimen (including each split specimen) provided under this subpart is retained for not less than three months following the date of the accident or incident (two years from the date of the accident or incident in the case of a specimen testing positive for alcohol or a controlled substance). Post-mortem specimens may be made available to the National Transportation Safety Board (on request).

(i) An employee (donor) may, within 60 days of the date of the toxicology report, request that his or her split specimen be tested by the designated laboratory or by another laboratory certified by Health and Human Services under that Department's Guidelines for Federal Workplace Drug Testing Programs that has available an appropriate, validated assay for the fluid and compound declared positive. Since some analytes may deteriorate during storage, detected levels of the compound shall, as technically appropriate, be reported and considered corroborative of the original test result. Any request for a retest shall be in writing, specify the railroad, accident date and location, be signed by the employee/donor, be addressed to the Associate Administrator for Safety, Federal Railroad Administration, Washington, DC 20590, and be designated "ADMINISTRATIVELY CONFIDENTIAL: ATTENTION ALCOHOL/DRUG PROGRAM MANAGER." The expense of any employee-requested split specimen test at a laboratory other than the laboratory designated under this subpart shall be borne by the employee.

**§ 219.213 Unlawful refusals; consequences.**

(a) *Disqualification.* An employee who refuses to cooperate in providing breath, blood or urine specimens following an accident or incident specified in this subpart must be withdrawn from covered service and must be deemed disqualified for covered service for a period of nine (9) months in accordance with the conditions specified in § 219.107.

(b) *Procedures.* Prior to or upon withdrawing the employee from covered service under this section, the railroad

must provide notice of the reason for this action and an opportunity for hearing before a presiding officer other than the charging official. The employee is entitled to the procedural protection set out in § 219.104(d).

(c) *Subject of hearing.* The hearing required by this section must determine whether the employee refused to submit to testing, having been requested to submit, under authority of this subpart, by a representative of the railroad. In determining whether a disqualification is required, the hearing official shall, as appropriate, also consider the following:

(1) Whether the railroad made a good faith determination, based on reasonable inquiry, that the accident or incident was within the mandatory testing requirements of this subpart; and

(2) In a case where a blood test was refused on the ground it would be inconsistent with the employee's health, whether such refusal was made in good faith and based on medical advice.

**Subpart D—Testing for Cause**

**§ 219.300 Mandatory reasonable suspicion testing.**

(a) *Requirements.* (1) A railroad must require a covered employee to submit to an alcohol test when the railroad has reasonable suspicion to believe that the employee has violated any prohibition of subpart B of this part concerning use of alcohol. The railroad's determination that reasonable suspicion exists to require the covered employee to undergo an alcohol test must be based on specific, contemporaneous, articulable observations concerning the appearance, behavior, speech or body odors of the employee.

(2) A railroad must require a covered employee to submit to a drug test when the railroad has reasonable suspicion to believe that the employee has violated the prohibitions of subpart B of this part concerning use of controlled substances. The railroad's determination that reasonable suspicion exists to require the covered employee to undergo a drug test must be based on specific, contemporaneous, articulable observations concerning the appearance, behavior, speech or

## 2.6 Automobile Body Incineration

The information presented in this section has been reviewed but not updated since it was originally prepared because no recent data were found and it is rarely practiced today. Auto bodies are likely to be shredded or crushed and used as scrap metal in secondary metal production operations, which are discussed in Chapter 12 (Metallurgical Industry).

### 2.6.1 Process Description

Auto incinerators consist of a single primary combustion chamber in which one or several partially stripped cars are burned. (Tires are removed.) Approximately 30 to 40 minutes is required to burn two bodies simultaneously.<sup>2</sup> As many as 50 cars per day can be burned in this batch-type operation, depending on the capacity of the incinerator. Continuous operations in which cars are placed on a conveyor belt and passed through a tunnel-type incinerator have capacities of more than 50 cars per 8-hour day.

### 2.6.2 Emissions And Controls<sup>1</sup>

Both the degree of combustion as determined by the incinerator design and the amount of combustible material left on the car greatly affect emissions. Temperatures on the order of 650°C (1200°F) are reached during auto body incineration.<sup>2</sup> This relatively low combustion temperature is a result of the large incinerator volume needed to contain the bodies as compared with the small quantity of combustible material. The use of overfire air jets in the primary combustion chamber increases combustion efficiency by providing air and increased turbulence.

In an attempt to reduce the various air pollutants produced by this method of burning, some auto incinerators are equipped with emission control devices. Afterburners and low-voltage electrostatic precipitators have been used to reduce particulate emissions; the former also reduces some of the gaseous emissions.<sup>3,4</sup> When afterburners are used to control emissions, the temperature in the secondary combustion chamber should be at least 815°C (1500°F). Lower temperatures result in higher emissions. Emission factors for auto body incinerators are presented in Table 2.6-1. Particulate matter is likely to be mostly in the PM-10 range, but no data are available to support this hypothesis. Although no data are available, emissions of HCl are expected due to the increased use of chlorinated plastic materials in automobiles.

Table 2.6-1 (English And Metric Units). EMISSION FACTORS FOR AUTO BODY INCINERATION<sup>a</sup>

EMISSION FACTOR RATING: D

| Pollutants                                      | Uncontrolled |        | With Afterburner |        |
|-------------------------------------------------|--------------|--------|------------------|--------|
|                                                 | lb/car       | kg/car | lb/car           | kg/car |
| Particulates <sup>b</sup>                       | 2            | 0.9    | 1.5              | 0.68   |
| Carbon monoxide <sup>c</sup>                    | 2.5          | 1.1    | Neg              | Neg    |
| TOC (as CH <sub>4</sub> ) <sup>c</sup>          | 0.5          | 0.23   | Neg              | Neg    |
| Nitrogen oxides (NO <sub>2</sub> ) <sup>d</sup> | 0.1          | 0.05   | 0.02             | 0.01   |
| Aldehydes (HCOH) <sup>d</sup>                   | 0.2          | 0.09   | 0.06             | 0.03   |
| Organic acids (acetic) <sup>d</sup>             | 0.21         | 0.10   | 0.07             | 0.03   |

<sup>a</sup> Based on 250 lb (113 kg) of combustible material on stripped car body.
